PROFESSIONAL SUMMARY

Motivated Data Science undergraduate with hands-on experience in machine learning, data analysis, and statistical modeling. Proven ability to build end-to-end ML pipelines, clean messy datasets, and communicate insights through clear documentation. Passionate about leveraging data to solve real-world problems and eager to contribute to a professional data team environment.

EDUCATION

Bachelor of Science in Data Science and Analytics

Ghana Communication Technology University (GCTU) • Expected Graduation: 2028

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL
- **Data Analysis & Processing:** Pandas, NumPy, Data Cleaning, EDA, Feature Engineering
- **Machine Learning:** Scikit-learn, Logistic Regression, Random Forest, XGBoost, Model Evaluation
- **Data Visualization:** Matplotlib, Seaborn, Statistical Plots
- **Database Management:** PostgreSQL, Star Schema Design, Data Modeling
- **Tools & Platforms:** Git, GitHub, Jupyter Notebook, VS Code, Google Colab
- **Core Competencies:** Statistical Analysis, Data Transformation, Model Tuning, Technical Documentation

PROJECTS

Titanic Survival Prediction – Machine Learning Classification [\[GitHub\]](#)

- Built end-to-end ML pipeline: data cleaning, feature engineering, model training, and evaluation
- Handled missing values (median/mode imputation) and engineered categorical features using one-hot encoding
- Compared 4 models (Logistic Regression, Random Forest, XGBoost) using accuracy, precision, recall, F1-score
- Tuned Random Forest hyperparameters via RandomizedSearchCV, achieving 83% test accuracy
- Created confusion matrices, ROC curves, and feature importance visualizations for model interpretation

Online Retail Data Transformation – Data Engineering [\[GitHub\]](#)

- Cleaned and transformed 500K+ transaction records from messy retail dataset

- Identified and handled duplicates, cancellations, and invalid entries using Pandas
- Designed star-schema data model (fact and dimension tables) for PostgreSQL analytics
- Implemented ETL pipeline to prepare data for business intelligence and reporting
- Applied business logic to derive metrics like total revenue, customer segments, and product performance

Open Source Health Analysis – Data Analysis & Visualization[\[GitHub\]](#)

- Extracted and analyzed open-source project data using GitHub REST API
- Built automated ETL pipeline to collect, clean, and structure API response data
- Performed exploratory data analysis (EDA) to identify trends in contributor activity and engagement
- Created visualizations (time-series, distributions, correlation plots) to communicate insights

CERTIFICATIONS & TRAINING

- **Thrive Africa Professional Development Courses** – Advanced training in data science methodologies and professional skills
- Full Certification Portfolio: github.com/KevinOcran/Certifications

VOLUNTEER EXPERIENCE

Mathematics & Computing Instructor

Local Church School • 4 months • Taught Primary 4 to JHS 3

- Taught mathematics and computing fundamentals to students across multiple grade levels
- Developed lesson plans and educational materials tailored to different learning abilities
- Demonstrated strong communication skills and ability to explain technical concepts clearly
